Q1.> Compare the E-waste data of India with 5 other nations and reflect

Ans

India v/s China

China generates much more e-waste, but india has the highest growth rate

India v/s USA

The USA generates more e-waste than India and has a much better formal recycling system.

India v/s Germany

Germany generates less e-waste but recycles over half of it, unlike India.

India v/s Japan

Japan produces less e-waste and has a far more efficient recycling system than India.

India v/s Brazil

India generates more e-waste and has a faster growth rate, while both countries face recycling challenges

DATE:

Reflection

- India is one of the fastest growing e-waste generators.
- It's formal recycling rate is very low compared to developed countries.
- India needs stronger recycling infrastructure, stricter policy implementation, and greater public awareness for sustainable e-waste management.

Q2> Give 5 methods which can be implemented in India.

Ans

① Strengthen Formal collection and recycling systems.
→ Establish more authorized e-waste collection centers and improve formal recycling facilities to reduce dependence on the informed sector.

② Enforce strict e-waste laws - Japan
→ Improve implementation of e-waste regulations.

③ Promote reuse and repair - European Union (EU)
→ Encourage repairing and reusing electronics.

④ Increase public awareness - United kingdom
→ Educate people on proper e-waste disposal.

⑤ Producer take-back programs - Australia
→ manufacturers should collect old electronic products.
