E-WASTE MANAGEMENT RULES: COMPANY COMPLIANCE ANALYSIS

Name: Mayur Jadhav Roll No.: 24102B0029
Course: Computer Engineering Date: 31 August 2026

1. Basis of Analysis

The uploaded mini-task states that electronics companies must be registered under the applicable category (Manufacturer, Producer, Recycler or Refurbisher), meet the applicable EPR recycling target, and maintain the required compliance information. It gives EPR target percentages of 60% for FY 2023–24 and FY 2024–25, 70% for FY 2025–26 and FY 2026–27, and 80% from FY 2027–28 onward. It also defines compliance as actual recycled quantity being at least the applicable target. These requirements are taken directly from the supplied PDF. □filecite□turn0file0□L17-L24□ The same PDF asks for company name, entity type, annual e-waste, EPR target, registration fee and compliance status. □filecite□turn0file0□L25-L40□

> Important: The supplied PDF does not contain the actual EPR registration records or recycling quantities of the ten companies. Therefore, the company findings below are based on publicly available company disclosures and CPCB information. Where a company's disclosure does not provide enough data to calculate its exact EPR target or prove target achievement, this report does not claim a violation merely from missing information.

2. Five Selected Companies

Company	Evidence found	Assessment
Dixon Technologies	EPR applicability acknowledged; waste collection plan reported as aligned with the EPR plan submitted to Pollution Control Boards. Company also reports use of authorized recyclers.	Followed / No violation found Public disclosure supports compliance.
Kaynes Technology	FY 2024–25 annual-report disclosure says EPR is applicable and waste collection/disposal practices are aligned with EPR plans. It also states compliance with E-Waste Management Rules through authorized mechanisms.	Followed / No violation found Public disclosure supports compliance.
Syrma SGS Technology	Company disclosure states that EPR is applicable and that its waste collection plan is in line with the EPR plan submitted to Pollution Control Boards.	Followed / No violation found Public disclosure supports compliance.
VVDN Technologies	Company states that its EPR plan is intended to comply with the E-Waste Rules and that it partnered with a recycler/dismantler registered with the Haryana Pollution Control Board.	Followed / No violation found Evidence indicates an established compliance mechanism.
Centum Electronics	FY 2023–24 BRSR disclosure states that EPR is not applicable to the entity's activities. FY 2024–25 reporting separately records 6.30 MT of e-waste generated.	EPR not applicable according to disclosure No EPR violation established from the available evidence.

1. Dixon Technologies (India) Limited

Evidence: The FY 2023–24 disclosure states that EPR is applicable to Dixon and that its waste collection plan is in line with the EPR plan submitted to the Pollution Control Boards. The company also reported partnerships with authorized third-party recyclers for safe disposal of electronic and other processing waste. Its FY 2024–25 report continued to state that EPR is applicable and that the company is committed to compliance with relevant EPR regulations.

Assessment: FOLLOWED / NO VIOLATION FOUND.

Why: The available disclosures support the conclusion that Dixon has recognized EPR obligations and has a documented waste-management mechanism. However, the public information reviewed does not give the exact CPCB EPR target and actual EPR certificates/recycling quantity needed to independently prove the numerical target test in the supplied mini-task.

Source: Dixon FY 2023–24 Annual Report; Dixon FY 2024–25 Integrated Annual Report.

2. Kaynes Technology India Limited

Evidence: Kaynes' FY 2024–25 annual report states that EPR is applicable to its operations under environmental regulations including e-waste. It reports that its waste collection and disposal practices are aligned with EPR plans submitted to Pollution Control Boards and that the company uses authorized collection, recycling, refurbishment and disposal mechanisms.

Assessment: FOLLOWED / NO VIOLATION FOUND.

Why: This is direct company-reported evidence of alignment with the EPR plan and applicable E-Waste Management requirements. As with Dixon, the available disclosure does not publish enough numerical EPR-target information to independently calculate and verify the exact target-achievement test described in the supplied PDF.

Source: Kaynes Technology India Limited, Annual Report FY 2024–25.

3. Syrma SGS Technology Limited

Evidence: Syrma SGS's BRSR disclosure states that EPR is applicable and that its waste collection plan is in line with the EPR plan submitted to Pollution Control Boards. The company also explains that, as a B2B contract manufacturer, it has limited control over end-of-life handling of finished goods, while taking waste-management measures within its operations.

Assessment: FOLLOWED / NO VIOLATION FOUND.

Why: The company's disclosure directly answers the EPR-plan alignment question in the affirmative. Therefore, no violation of the EPR-plan requirement can be established from the evidence reviewed. Exact EPR target attainment is not independently verifiable from the disclosed figures.

Source: Syrma SGS Technology Limited, Annual Report/BRSR disclosures.

4. VVDN Technologies Private Limited

Evidence: VVDN states on its e-waste management page that it has an EPR plan intended to comply with the E-Waste (Management) Rules and amendments. It also reports partnering with E-Waste Recyclers India, a recycler and dismantler registered with the Haryana State Pollution Control Board, for e-waste recycling.

Assessment: FOLLOWED / NO VIOLATION FOUND.

Why: The evidence demonstrates a formal EPR/waste-recycling mechanism and use of an authorized recycler. The available public page does not disclose the company's exact EPR target, actual recycled

quantity, or CPCB return figures, so a numerical target violation cannot be proven from this evidence alone.

Source: VVDN Technologies – E-Waste Management disclosure.

5. Centum Electronics Limited

Evidence: Centum's FY 2023–24 BRSR explicitly states that EPR is 'Not Applicable' to the entity's activities. Its FY 2024–25 annual report separately reports 6.30 MT of e-waste generated during the year. The existence of operational e-waste does not by itself establish that Centum was legally an EPR Producer under the rules.

Assessment: EPR NOT APPLICABLE / NO VIOLATION FOUND.

Why: Based on the company's stated applicability assessment, the EPR target requirement in the supplied mini-task cannot be applied to Centum without additional evidence showing that it falls within the Producer category. Thus, no EPR violation is established from the available public disclosures.

Source: Centum Electronics BRSR FY 2023–24 and Integrated Annual Report FY 2024–25.

3. Rules / Clauses Checked

Rule/check from supplied PDF	How it was considered
Registration as Manufacturer / Producer / Recycler / Refurbisher	Company disclosures were checked for recognition of EPR applicability and waste-management responsibility. The supplied PDF lists these entity categories. □filecite□turn0file0□L9-L16□
EPR recycling target	The supplied PDF gives 60% for FY 2023–24/FY 2024–25, 70% for FY 2025–26/FY 2026–27 and 80% from FY 2027–28. □filecite□turn0file0□L17-L24□
Actual recycled ≥ target = compliant	This is the mini-task's compliance test. □filecite□turn0file0□L33-L40□ Because exact company EPR target and actual-recycled figures were not publicly available for all five selected companies, the report does not falsely assign a numerical compliant/non-compliant result.
Registration fee	The supplied PDF gives fee slabs based on annual recycling target. □filecite□turn0file0□L25-L32□ The exact company-specific fee cannot be calculated without the applicable target quantity.

4. Conclusion

Among the five selected companies, Dixon Technologies, Kaynes Technology, Syrma SGS and VVDN Technologies have publicly documented EPR/waste-management practices that support compliance with the applicable EPR requirements. Centum Electronics has publicly reported that EPR is not applicable to its activities, so an EPR target violation is not established from the evidence reviewed. The important limitation is that company disclosures do not provide enough CPCB-specific numerical data for this report to independently calculate each company's legal EPR obligation and compare it with actual EPR certificate/recycling achievement. Therefore, the findings are best described as 'no violation found based on available public evidence' rather than a legal certification of complete compliance.
